Target Role: APS Production Engineer - Data Analyst

Company: BNP Paribas

Subject: Application for APS Production Engineer - Data Analyst - Kartik Bhatt

Dear Hiring Manager,

I am writing to express my strong interest in the APS Production Engineer - Data Analyst position at BNP Paribas. With over 3.5 years of experience driving process automation, data analytics, system governance, and operational support across enterprise environments at KPMG and GlobalLogic, I am eager to leverage my technical skills to support mission-critical production systems and deliver actionable analytics for BNP Paribas.

During my tenure at KPMG as an Analyst, I engineered complex data solutions using Power Platform, SQL, and SharePoint Online, automating manual workflows to save over 2,000 hours annually. I spearheaded the automated migration of legacy Excel data across 45+ operational pillars, deploying automated alerting, change management, and permission governance. Additionally, I architected GenAI Copilot agents for unstructured data handling and maintained repositories of over 30,000 global assets, ensuring robust system reliability and data accuracy.

At GlobalLogic, working on client projects including Google, I established data entry QA frameworks that reduced errors by 25% and elevated project delivery quality scores from 74% to 95%. My background in rigorous data validation, process documentation, and handling high-volume content assets equips me to quickly diagnose operational issues, ensure continuous data flow, and optimize production support workflows at BNP Paribas.

I am excited about the opportunity to contribute to BNP Paribas's technology operations by bringing a strong analytical mindset, deep operational automation expertise, and a commitment to delivery excellence. Thank you for your time and consideration, and I look forward to discussing how my experience aligns with your team's objectives.

Sincerely,

Kartik Bhatt
