Target Role: Data Analyst Mentor (Freelance)

Company: Irohub Infotech

Subject: Application for Data Analyst Mentor (Freelance) Position - Kartik Bhatt

Dear Hiring Manager,

I am writing to express my enthusiastic interest in the Data Analyst Mentor (Freelance) position at Irohub Infotech. With over 3.5 years of practical experience driving data analytics, business intelligence solutions, and process automation across KPMG and GlobalLogic, I am eager to leverage my technical skill set and passion for knowledge sharing to train and mentor aspiring data professionals.

During my tenure as an Analyst at KPMG, I built end-to-end data analytics and automation solutions using MS Excel, Power BI, SQL/MySQL, and SharePoint Online across 13 sectors. My work involved building automated data integration pipelines for 45+ operational pillars, creating interactive Power BI reports, and managing large-scale global repositories of 30,000+ assets. These experiences have equipped me with deep expertise in data wrangling, data modeling, visualization, and storytelling—core skills I am eager to pass on to learners through practical, real-world projects.

Furthermore, my experience at GlobalLogic involved establishing QA standards, managing technical documentation for 10+ engagements, and building training datasets for Google GenAI projects. This background in structuring learning materials, performing code/data reviews, and uplifting project delivery quality from 74% to 95% directly translates into designing effective learning modules, evaluating assignments, and providing constructive career guidance to students at Irohub Infotech.

I am confident that my practical industry experience, strong technical foundation in Excel, Power BI, and MySQL, and dedication to learner success make me a strong candidate for this mentoring role. I welcome the opportunity to discuss how I can help Irohub Infotech shape top-tier data analytics talent. Thank you for your time and consideration.

Sincerely,

Kartik Bhatt
