Target Role: Avery Dennison Operations MIS - Data Analyst

Company: Averydennison

Subject: Driving Operational Excellence & Scalable Solutions as Avery Dennison Operations MIS - Data Analyst

Dear Hiring Manager,

Dear Hiring Manager, I am writing to express my strong enthusiasm for the Operations MIS - Data Analyst position at Averydennison. With over 3.5 years of specialized experience in operational data analysis, advanced MIS reporting, workflow automation, and dashboard creation across top-tier organizations like KPMG and GlobalLogic, I am confident in my ability to immediately enhance Avery Dennison's data reporting processes and operational efficiency.

At KPMG, I led cross-functional data and process automation initiatives across 13 business sectors. I built multi-tiered reporting architectures and automated workflows using Power BI, Power Automate, and custom VBA/Macros, saving over 2,000 operational hours annually. My work involved transitioning legacy Excel data collections for 45+ business units into centralized, automated SharePoint integration pipelines, ensuring complete data integrity, standardizing metrics, and providing executive leadership with accurate, real-time dashboards.

During my tenure at GlobalLogic supporting key client accounts including Google, I focused heavily on data accuracy, quality control, and process optimization. I implemented QA processes that reduced operational data entry errors by 25% and spearheaded reporting documentation that elevated onshore delivery quality from 74% to 95%. This hands-on background in extracting, transforming, and validating operational data from diverse systems matches Avery Dennison's requirements for consistent, accurate reporting across multi-functional teams.

I am eager to leverage my technical toolkit—spanning Power BI, advanced Excel/VBA, SQL, Python, and automated reporting systems—to support Averydennison's global operations. Thank you for your time and consideration. I welcome the opportunity to discuss how my background in operational MIS and process optimization can contribute to your team's goals.

Sincerely,

Kartik Bhatt
